Red Hat Ansible Tower is the best way to run Ansible in your organization. Red Hat Ansible Tower is more than the web UI and rest API for Ansible. It also centralizes and controls your Ansible infrastructure with a visual dashboard, role-based access control, job scheduling, and graphical inventory management.

Red Hat Ansible Tower - Red Hat Customer Portal
In a previous article, I covered Red Hat Ansible basics and installed Ansible, creating one control node named RHEL8 and four managed nodes (node1, node2, node3, and node4), all running Red Hat Enterprise Linux. Now, for Ansible to communicate with a managed node, you need to configure the control node and the managed nodes with a user account, and give that user account privilege escalation to run commands without having to enter a password.

Configuring Ansible | Enable Sysadmin - Red Hat
Ansible Tower is a REST API, web service, and web-based console designed to make Ansible more usable for IT teams with members of different technical proficiencies and skill sets. It is a hub for automation tasks. Tower is a commercial product supported by Red Hat, Inc. but derived from AWX upstream project, which is open source since September 2017.

Ansible (software) - Wikipedia
