This title offers instant access to formulas used daily by the best talent on Wall Street. Since its publication in 1997, "The Complete Guide to Option Pricing Formulas" has become the bible of option formulas for everyone from professional traders to money managers and investors.

The Complete Guide to Option Pricing Formulas: Amazon.co ...

For example, say you had a call option with a current price of \$4 and a Theta of -0.10 and you wanted to predict the price in five days. A Theta of -0.10 means that every day the option will experience a price drop of \$0.10. So after five days, the price of the option should fall to \$3.50, all else being equal.

Theta is expressed as a negative number in terms of dollars. As each day ticks by the option's price will drop by the Theta. For example, you have a The Option Prophet (sym: TOP) long call at a price of \$5.50 and a Theta of -0.35. The next day our long call would be worth \$5.15 and the day after \$4.80.

The Complete Guide On Option Theta - The Option Prophet

An option provides the holder with the right to buy or sell a specified quantity of an underlying asset at a fixed price (called a strike price or an exercise price) at or before the expiration date of the option. Since it is a right and not an obligation, the holder can choose not to exercise the right and allow the option to expire.
