I Assessment Of Condition Indices

Facility condition assessment is an analysis of the condition of a facility in terms of age, design, construction methods, and materials. The industry professionals who perform the assessment are typically architects and engineers, and skilled-trade technicians. Engineering and architectural professional opinions as to the conditions observed are part of the assessment. Building diagnostics go beyond FCAs to determine solutions to the problems found and predict outcomes of the solutions. This an

The Index of Wetland Condition (IWC) is a standard method developed in Victoria for rapid assessment of wetland condition. It is based on the state of the biological, physical and chemical components of the wetland ecosystem and their interactions. The method aims to differentiate natural from human induced changes in wetland condition and assist in management decisions.
