Light From A Distant Star

Light from a Distant Star is a gripping coming-of-age story with a brutal murder at its heart and a heroine as unforgettable as Harper Lee's "Scout." It is early summer and Nellie Peck is on the cusp of adolescence--gangly, awkward, full of questions, but keenly observant and wiser than many of the adults in her life.

Answer: Distant Starlight - A light-year is the maximum distance that light can travel in one year in the vacuum of space. Consequently, it takes billions of years for light to travel billions of light-years through space. From our vantage point here on Earth we can see light from stars that are billions of light-years away.

How can the light of stars billions of light years away ...
