Living Things and Their Environment - Jason's classroom

Scientific view. The world contains a wide diversity of physical conditions, which creates a variety of environments where living things can be found. In all these environments, organisms interact and use available resources, such as food, space, light, heat, water, air, and shelter. Each population of organisms, and the individuals within it, interact in specific ways that are limited by and can benefit from other organisms.

The environment: living and non-living things

A wide variety of plants use sunlight, water, carbon dioxide, soil, temperature and rainfall to grow in this environment. Using these plants produce food and release a gas called oxygen into the environment. These plants, in turn, can feed many different types of insects, fish, birds, and mammals in and around the lake as well as these animals can breath the gas called oxygen released by these plants.
