Abstract. Congenital deformities of the lower limb are difficult pathologies for treatment. In this chapter fibular hemimelia, tibial hemimelia, proximal focal femoral deficiency (PFFD), congenital pseudoarthrosis of the tibia are going to be explained. Fibular hemimelia should be named postaxial hypoplasia of lower extremity because it is accompanied by other deformities of lower extremity such as proximal femoral deficiency, coxa vara, congenital short femur, instabilities of knee, tarsal ...
