## Stability Modeling With Slope W

SLOPE/W was the very first geotechnical software product available commercially for analyzing slope stability. Currently, SLOPE/W is being used by thousands of professionals both in education and in practice. Over the years, as computer technology has advanced, SLOPE/W has continually been enhanced and upgraded.

## Stability Modeling with SLOPE/W

Slope stability analysis. SLOPE/W is the leading slope stability software for soil and rock slopes.

SLOPE/W can effectively analyze both simple and complex problems for a variety of slip surface shapes, pore-water pressure conditions, soil properties, and loading conditions. With this comprehensive range of features, SLOPE/W can be used to analyze almost any slope stability problem you will encounter in your geotechnical, civil, and mining engineering projects.

An accurate slope prediction model is important for slope reinforcement before the disaster. The *k*-nearest neighbor (KNN) algorithm, as a simple and effective nonparametric machine learning method, is widely applied in classification recognition. In our study, the *k*-nearest neighbor (KNN) algorithm is improved to reduce its sample dependence and improve the robustness of the ...
