Unix Process Exit Code 137

honzajavorek commented on Mar 3, 2017 Under some circumstances the OS returns exit status code 137 for processes, which were killed, instead of no status code. Dredd should count with that. I already tried to introduce a piece of code to handle that in commit 5975ddb, but it never got to master.

Treat exit status code 137 as "process killed" · Issue ...

According to this post, the exit code of 137 can be due to two main issues. The container received a docker stop and the app is not gracefully handling SIGTERM The container has run out of memory (OOM). I know the 137 exit code is not because my container has run out of memory.

Docker-compose exit code is 137 when there is no OOM ...

What is an exit code in bash shell? Every Linux or Unix command executed by the shell script or user has an exit status. Exit status is an integer number. 0 exit status means the command was successful without any errors. A non-zero (1-255 values) exit status means command was a failure. How to find out the exit code of a command

Bash get exit code of command on a Linux / Unix - nixCraft

An exit code, or sometimes known as a return code, is the code returned to a parent process by an executable. On POSIX systems the standard exit code is 0 for success and any number from 1 to 255 for anything else.

Linux and Unix exit code tutorial with examples | George Orno

Exit code 137 means that your process was killed by (signal 9) SIGKILL. In the case you manually stopped it - there's your answer. If you didn't manually stop the script and still got this error code, then the script was killed by your OS. In most of the cases, it is caused by excessive memory usage.

python - Process finished with exit code 137 in PyCharm ...

Out of range exit values can result in unexpected exit codes. An exit value greater than 255 returns an exit code modulo 256 . For example, exit 3809 gives an exit code of 225 (3809 % 256 = 225).

Exit Codes With Special Meanings - Linux Documentation Project

You'll see this exit code when you do a docker stop and the initial graceful stop fails and docker has to do a sigkill. Per @HackToday 's comment/link it is a standard: $128 + 9 = 137$ (9 coming from SIGKILL). Shugyousha mentioned this issue on Aug 4, 2017 Check failing with exit status 137 [concourse/git-resource#133](#)

What is Docker container exit code 137? · Issue #21083 ...

Had code 137 with JAVA based elasticsearch. (partly my bad for running a few of the mem hogs at once . Containers: 10 Running: 5 Paused: 0 Stopped: 5) My vm mem : Total Memory: 1.952 GiB. However adding add this env config to fix it : ENV ES_JAVA_OPTS "-Xms1g -Xmx1g" Wonder how to reserve "a" container (process) more memory.

Container crashes with code 137 when given high load ...

Mainly, I do understand how it decides its exit code ☐☐ But if robo-parcept can be made to invoke Codeception in a way that different generated files would be created for every parallel process. An other way would be to stop using generated files altogether in Codeception. But I have no idea what this entails. Environment: OS: CentOS Linux 7.3

Occasionally a test process exits with status code 135 ...

Linux; 10 Comments. 1 Solution. 11,027 Views. Last Modified: 2012-12-10. We have a JVM that is stopping with an exit code 137 (128 + signal number for SIGKILL) and no application logs about the stop. I assume that the JVM would never kill itself, so this must mean that another process/user killed the JVM?

java jvm - exit code 137 (128 + signal number for SIGKILL ...

Exit Code 137 Linux sh, set execute permission on that file by typing chmod a+x name. I don't know if this helps, but I managed to get a bit further without full debug build. js should see the exit code as 1. This folder must contain a sonar-project.
